Letter From Leadership

At AdventHealth, our mission of Extending the Healing Ministry of Christ goes beyond our walls. We are committed to addressing the needs of the communities we serve with a wholistic focus—one that strives to heal and restore the body, mind, and spirit.

Every three years, AdventHealth hospitals complete a Community Health Needs Assessment. We collaborate with community organizations, public health experts and people like you—those who understand our communities best. This in-depth look at the overall health of the community as well as barriers to care helps us better understand each area’s unique needs, so we can address the issues that matter most.

AdventHealth is blessed to serve communities across the United States. In big cities and small towns, our promise of wholeness is constant. We believe all people deserve to feel whole, and we are committed to meeting them wherever they are on that journey and supporting them along the way.

Work of this magnitude is not possible without the incredible partnership of public health experts, community health organizations and countless community members. It is through open dialogue and constant collaboration with these key partners that AdventHealth will bring wholeness to all communities we serve.

In His Service,
Terry Shaw
President and CEO
AdventHealth
Executive Summary

Advent Health System Georgia, Inc. dba AdventHealth Gordon will be referred to in this document as AdventHealth Gordon or “the Hospital.” The Hospital conducted a community health needs assessment from August 2021 to June 2022. The goals of the assessment were to:

- Engage public health and community stakeholders including low-income, minority and other underserved populations.
- Assess and understand the community’s health issues and needs.
- Understand the health behaviors, risk factors and social determinants that impact health.
- Identify community resources and collaborate with community partners.
- Publish the Community Health Needs Assessment.
- Use assessment findings to develop and implement a 2023-2025 Community Health Plan based on the needs prioritized in the assessment process.

Community Health Needs Assessment Committee

In order to ensure broad community input, AdventHealth Gordon created a Community Health Needs Assessment Committee (CHNAC) to help guide the Hospital through the assessment process. The CHNAC included representation from the Hospital, public health experts and the broad community. This included intentional representation from low-income, minority and other underserved populations.

The CHNAC met three times in 2021-2022. They reviewed the primary and secondary data and helped to identify the top priority needs in the community.

See Prioritization Process for a list of CHNAC members.

Hospital Health Needs Assessment Committee

AdventHealth Gordon also convened a Hospital Health Needs Assessment Committee (HHNAC). The purpose of the HHNAC was to select the needs the Hospital would address as a result of the findings in the assessment. The HHNAC made this decision by reviewing the priority needs selected by the CHNAC and the internal Hospital resources available. With this information the HHNAC was able to determine where the Hospital could most effectively support the community.

See Prioritization Process for a list of HHNAC members.

Selection Criteria

The HHNAC participated in a prioritization process after data review and discussion through which the needs were ranked based on established criteria. See the Priorities Selection for more.

The HHNAC reviewed and discussed the needs that had been identified by the CHNAC and the available resources to address them in the community. The HHNAC also considered the Hospital’s current resources and strategies which could most effectively address the needs having the biggest short term and long term impact on the community. Through these discussions the Hospital selected the needs it is best positioned to impact.

Selection Criteria

The CHNAC and the HHNAC also considered four factors during prioritization:

A. Alignment: Does this issue align with our mission, strategy, public health or community goals?
B. Impact on Community: What is the scope, size and seriousness of this issue? What are the consequences to the health of the community of not addressing this issue now?
C. Resources: Are there existing, effective interventions and opportunities to partner with the community to address this issue?
D. Outcome Opportunities: Can an impact on this issue be made in a demonstrable way, and will interventions have an impact on other health and social issues in the community?

Executive Summary

Advent Health System Georgia, Inc. dba AdventHealth Gordon will be referred to in this document as AdventHealth Gordon or “the Hospital.” The Hospital conducted a community health needs assessment from August 2021 to June 2022. The goals of the assessment were to:

D. Outcome Opportunities: Can an impact on this issue be made in a demonstrable way, and will interventions have an impact on other health and social issues in the community?
Priority Issues to be Addressed
The priority issues to be addressed are:
1. Heart Disease and Heart-Related Issues
   Focusing on seniors and low-income individuals residing in the 30701 zip code
2. Cancer
   Focusing on low-income individuals residing in the 30701 zip code
3. Vaping
   Focusing on adults and youth residing in the 30701 zip code

See Priorities Selection for more.

Approval
On September 27, 2022, the AdventHealth Gordon Board approved the Community Health Needs Assessment findings, priority issues and final report. A link to the 2022 Community Health Needs Assessment was posted on the Hospital’s website prior to December 31, 2022.

Next Steps
AdventHealth Gordon will work with the CHNAC and the HHNAC to develop a measurable implementation strategy called the 2023-2025 Community Health Plan to address the priority issues. The plan will be completed and posted on the Hospital’s website prior to May 15, 2023.

About AdventHealth
AdventHealth Gordon is part of AdventHealth. With a sacred mission of Extending the Healing Ministry of Christ, AdventHealth strives to heal and restore the body, mind and spirit through our connected system of care. More than 80,000 skilled and compassionate caregivers serve 47 million patients annually. From physician practices, hospitals, outpatient clinics, skilled nursing facilities, home health agencies and hospice centers, AdventHealth provides individualized, holistic care at nearly 50 hospital campuses and hundreds of care sites throughout nine states.

Committed to your care today and tomorrow, AdventHealth is investing in research, new technologies and the people behind them to redefine medicine and create healthier communities. In a 2020 study by Stanford University, physicians and researchers from AdventHealth were featured in the ranking of the world’s top 2% of scientists. These critical thinkers are changing medicine and shaping the future of health care.

AdventHealth is also an award-winning workplace aiming to promote personal, professional and spiritual growth with its workplace culture, having been recognized by Becker’s Hospital Review on its “100 Top Places to Work in Healthcare” three years straight. This recognition is given annually to health care organizations that promote workplace diversity, employee engagement and professional growth.

AdventHealth Gordon
AdventHealth Gordon is a comprehensive, 69-bed community hospital located in Gordon County, Georgia. Built originally in 1953 as Gordon County Hospital, the Hospital moved to its current location in the 1970’s to meet the growing needs in the community. The Hospital became part of the Adventist Health System in 1994 and officially became AdventHealth Gordon in 2019. In 2020, AdventHealth Gordon completed a project to enhance its services offered to the community. The project included the construction of the Edna Owens Breast Center, relocation and expansion of The Baby Place, expansion and renovation of the operating room and construction of a new cardiac catheterization lab.

AdventHealth Gordon offers many services including allergy care, cancer care, diabetes, education, emergency and urgent care, endocrinology, heart and vascular care, home care, imaging services, lab services, lifestyle medicine, mother and baby care, ophthalmology, orthopedic care, pain medicine, pediatrics, physical therapy, primary care, sleep medicine, sports medicine, surgical care, urology, women’s care and wound care.

Amwell, a national telehealth leader, named AdventHealth the winner of its Innovation Integration Award. This telemedicine accreditation recognizes organizations that have identified connection points within digital health care to improve clinical outcomes and user experiences. AdventHealth was recognized for its innovative digital front door strategy, which is making it possible for patients to seamlessly navigate their health care journey. From checking health documentations and paying a bill, to conducting a virtual urgent care visit with a provider, we are making health care easier by creating pathways to wholistic care no matter where your health journey starts.
COMMUNITY OVERVIEW

Community Description
AdventHealth Gordon is located in Gordon County, Georgia. The Hospital defines its community as the Total Service Area (TSA), the area in which over 90% of its patient population lives. This includes 10 zip codes across four counties: Gordon, Murray, Whitfield and Bartow.

According to the 2020 Census, the population in the Hospital’s Total Service Area has grown 2.2% in the last ten years to 189,592 people. This is twenty percent the amount of growth seen in Georgia since the last Census.

Demographic and community profile data in this report are from publicly available data sources such as the US Census Bureau and the Center for Disease Control and Prevention, unless indicated otherwise. Data are reported for the TSA unless listed differently. Data are also provided to show how the community compares locally, in the state and at a national level for some indicators.

Community Profile

Age and Sex
The median age in the Hospital’s community is 37.4, higher than that of state which is 35.9 but lower than the US, 38.2.

Females are the majority, representing 50.7% of the population. Middle-aged women, 40-64 are the largest demographic in the community at 16.2%.

Children are 25.2% of the total population in the community. Infants, those zero to four, are 6.2% of that number. The community birth rate is 53.7 births per 1,000 women aged 15-50, this is higher than the US average of 51.9 and then that of the state, 51.6. In the Hospital’s community, 23.9% of children aged 0-4 and 24% of children aged 5-17 live in poverty.

AdventHealth Gordon
Race and Ethnicity
In the Hospital’s community, 65.4% of the residents are non-Hispanic White, 3.3% are non-Hispanic Black and 26.6% are Hispanic or Latino. Residents that are of Asian or Pacific Islander descent represent 1.2% of the total population, while .2% are Native American and 3.1% are two or more races.

Social Determinants of Health
According to the CDC, social determinants of health (SDOH) are the conditions in the places where people live, learn, work and play that affect a wide range of health risks and outcomes. Social determinants of health are increasingly seen as the largest contributing factor to health inequities in communities throughout the country.

The Hospital categorized and analyzed SDOH data following the Healthy People 2030 model. This approach was chosen so, when possible, the Hospital could align its work with national efforts when addressing social determinants of health. For the purposes of the CHNA the Hospital will follow this model for reporting any related data.

Economic Stability: This includes areas such as income, cost of living, food security and housing stability.

Education Access and Quality: This focuses on topics such as high school graduation rates, enrollment in higher education, literacy and early childhood education and development.

Health Care Access and Quality: This includes topics such as access to health care, access to primary care and health insurance coverage.

Neighborhood and Built Environment: This includes areas like quality of housing, access to transportation, availability of healthy foods and neighborhood crime and violence.

Social and Community Context: This focuses on topics such as community cohesion, civic participation, discrimination and incarceration.

The Healthy People 2030 place-based framework outlines five areas of SDOH:

- Economic Stability
- Education Access and Quality
- Health Care Access and Quality
- Neighborhood and Built Environment
- Social and Community Context

Economic Stability
Income
The median household income in the Hospital’s community is $51,691. This is below the median for both the state and the US. In the community, 16% of residents live in poverty, this is higher than the poverty rate of the state, 14.3% and US, 12.8%.

Food Insecurity and Housing Stability
People who are food insecure, having reduced quality and/or amount of food intake, may be at an increased risk of negative health outcomes. Studies have shown an increased risk of obesity and chronic disease in adults who are food insecure. Children who are food insecure have been found to have an increased risk of obesity and developmental problems compared to children who are not. Feeding America estimates for 2020 showed the food insecurity rate in the Hospital’s community as 16.1%.

Increased evidence is showing a connection between stable and affordable housing and health. When households are cost burdened or severely cost burdened, they have less money to spend on food, health care and other necessities. Having less access can result in more negative health outcomes. Households are considered cost burdened if they spend more than 30% of their income on housing and severely cost burdened if they spend more the 50%.
Education Access and Quality

Research shows education can be a predictor of health outcomes, as well as a path to address inequality in communities. Better education can lead to people having an increased understanding of their personal health and health needs. Higher education can also lead to better jobs, which can result in increased wages and access to health insurance.

In the Hospital’s community, there is a 73.4% high school graduation rate, which is lower than both the state and national average. The rate of people with a post-secondary degree is 20.9%, which is lower than in both the state and nation.

Early childhood education is uniquely important and can improve the cognitive and social development of children. This helps provide the foundation for long term academic success, as well as improved health outcomes. Research on early childhood education programs shows that long-term benefits include improved health outcomes, savings in health care costs and increased lifetime earnings.

In the Hospital’s community, 31.7% of 3–4-year-olds were enrolled in preschool. This is lower than both the state (49.1%) and the national (47.3%) average, which leaves a large percentage of children in the community who may not be receiving these early foundational learnings.

Health Care Access and Quality

In 2020, 17% of community members aged 18-64 were found to not have health insurance. A lack of health insurance can lead to delayed care, resulting in more serious health conditions and increased treatment costs. Although health insurance coverage levels can be a strong indicator of a person’s ability to access care, there are other potential barriers that can delay care for many people.

Accessing health care requires more than just insurance, there also need to be available health care professionals to provide care. When more providers are available in a community access can be easier, particularly for those experiencing transportation challenges.

In the counties that the Hospital serves, Whitfield County has the most mental health and primary care providers available.

Routine checkups can provide an opportunity to identify potential health issues and when needed develop care plans. In the Hospital’s community, 73.2% of people report visiting their doctor for routine care.

Neighborhood and Built Environment

Increasingly, a community’s neighborhoods and built environment are being shown to impact health outcomes. If a neighborhood is considered to have “low food access”, which is defined as being more than 1/2 mile from your nearest supermarket in an urban area or 10 miles in a rural area, it may make it harder for people to have a healthy diet. A very low food access area is defined as being more than 1 mile from your nearest supermarket in an urban area or 20 miles in a rural area.

A person’s diet can have a significant impact on health, so access to healthy food is important. For example, the largest contributors to cardiovascular disease are obesity and type 2 diabetes, both of which can be impacted by diet. In the Hospital’s community, 37.2% of the community lives in a low food access area, while 22.9% live in a very low food access area.

Access to public transportation is also an important part of a built environment. For people who do not have cars, reliable public transportation can be essential to access health care, healthy food and maintaining employment. In the community, 6.1% of the households do not have an available vehicle.

Social and Community Context

People’s relationships and interactions with family, friends, co-workers and community members can have a major impact on their health and well-being. When faced with challenges outside of their control, positive relationships with others can help reduce negative impacts. People can connect through work, community clubs or others to build their own relationships and social supports. There can be challenges to building these relationships when people don’t have connections to create them or there are barriers like language between groups.

In the community, 9.3% of youth aged 16-19 were reported as disconnected, which means they were neither enrolled in school nor working at the time. Also, in the community 27.9% of seniors (age 65 and older) report living alone and 6.5% of residents report having limited English proficiency. All these factors can create barriers to feeling connected in the community.

Disconnected Youth Reported: 9.3%
The health of people living in the same community can be very different because there are so many influencing factors. To understand and assess the most important health needs of its unique community and the people in it, the Hospital, in collaboration with the AdventHealth Corporate team, solicited input directly from the community and from individuals who represent the broad interests of the community. A real effort was made to reach out to all members of the community to obtain perspectives across age, race/ethnicity, gender, profession, household income, education level and geographic location. The Hospital, aided by the AdventHealth Corporate team, also collected publicly available data and internal Hospital utilization data for review.

The Hospital partnered with local community organizations and stakeholders, including those in public health and those who represent the interests of medically underserved, low-income and minority community members, to form a Community Health Needs Assessment Committee (CHNAC) to guide the assessment process. During data review sessions, community members of the CHNAC provided insight on how health conditions and areas of need were impacting those they represented. The CHNAC used the data review and discussion sessions to understand the most important health needs and barriers to health the community was facing and to guide the selection of needs to be addressed in the 2022 CHNA.

Community Input

The Hospital collected input directly from the community and from community stakeholders, individuals working in organizations addressing the needs and interests of the community. Input was collected through two different surveys: the community health survey and the stakeholder survey.

Community Health Survey

- Provided in both English and Spanish to anyone in the community and accessible through web links and QR codes.
- Links and QR codes shared through targeted social media posts and with community partners including public health organizations. Partners were provided links to the survey with the request that it be sent to listservs, electronic mailing lists, they maintained and when possible shared on their own social media channels.

Stakeholder Survey

- Participants were asked to provide input on health and barriers to health they were seeing in the community.
- Surveys were sent to individuals working at community organizations, including public health organizations, that work to improve the health and wellbeing of the community.
- A focus was on hearing from stakeholders who represent or serve communities that are underserved, underrepresented, lower income and/or who are more likely to be impacted by the social determinants of health.
Public and Community Health Experts Consulted

A total of eight stakeholders provided their expertise and knowledge regarding their community including:

Secondary Data

To inform the assessment process, the Hospital collected existing health related and demographic data about the community from publicly available sources and Metopio, a web-based data platform. This included data on health conditions, social determinants of health and health behaviors.

The most current public data for the assessment was compiled and sourced from government and public health organizations including:

- US Census Bureau
- Centers for Disease Control and Prevention
- Feeding America
- County Health Rankings
- The State Health Department

Hospital utilization data for 2019-2021 was also used in the assessment. Data was for uninsured or self-pay patients who visited the Hospital for emergency department, inpatient or outpatient services. The top ten diagnosis codes were provided by the AdventHealth finance team for emergency room, inpatient and outpatient visits.

9 Metopio – Ridiculously easy data tools to understand places and populations.
The Findings

Throughout the assessment process there were several themes from community input that rose to the top, which were mentioned across numerous issues and health needs, including:

Access: A need for more affordable and accessible entry points to care in the community, including for primary, dental and mental health care.

Availability: A community need for more available social support services for everyone and recreational facilities for youth and seniors.

Transportation: The barrier that a lack of transportation presents to accessing services in community.

Lifestyle: A need to increase understanding on the importance of lifestyle choices on health and health outcomes.

Mental Health: An awareness of increasing mental health needs in the community and the resources to support the growing need.

When reviewing the data for prioritization, the CHNAC considered the identified themes and their impact on the communities whose interests they represented.

The significant needs identified in the assessment process included:

Cancer: Cancer is a disease in which some of the body’s cells grow uncontrollably and spread to other parts of the body. Cancer can start almost anywhere in the human body, which is made up of trillions of cells. Normally, human cells grow and multiply (through a process called cell division) to form new cells as the body needs them. When cells grow old or become damaged, they die, and new cells take their place. Sometimes this orderly process breaks down, and abnormal or damaged cells grow and multiply when they shouldn’t. These cells may form tumors, which are lumps of tissue. Tumors can be cancerous or not cancerous (benign).

Cardiovascular Disease: Cardiovascular disease generally refers to conditions that involve narrowed or blocked blood vessels that can lead to a heart attack, chest pain (angina) or stroke. Other heart conditions, such as those that affect your heart’s muscle, valves or rhythm, also are considered forms of heart disease.

Food Insecurity: Food insecurity exists when people do not have physical and economic access to sufficient and nutritious food that always meets their dietary needs and food preferences. Food insecurity has been linked to negative health outcomes in children and adults, as well as potentially causing trouble for children in schools.

Diabetes: Diabetes is a group of diseases characterized by high blood sugar. When a person has diabetes, the body either does not make enough insulin (type 1) or is unable to properly use insulin (type 2). When the body does not have enough insulin or cannot use it properly, blood sugar (glucose) builds up in the blood. Prediabetes is a condition in which blood sugar is higher than normal but not high enough to be classified as diabetes.

People with diabetes can develop high blood pressure, high cholesterol and high triglycerides (a type of fat in the blood). High blood sugar, particularly when combined with high blood pressure and high triglycerides, can lead to heart disease, stroke, blindness, kidney failure, amputations of the legs and feet and even early death. Diabetes is also associated with increased risk of certain types of cancer, such as liver, pancreas, uterine, colon, breast and bladder cancer. High blood sugar also increases a person’s chance of developing dementia and Alzheimer’s disease.

Tobacco and Vaping: Tobacco smoking is the practice of burning tobacco and inhaling the smoke produced. Smoking leads to disease and disability and harms nearly every organ of the body. Additionally, smoking causes cancer, heart disease, stroke, lung diseases, diabetes and chronic obstructive pulmonary disease (COPD), which includes emphysema and chronic bronchitis. Smoking also increases risk for tuberculosis, certain eye diseases and problems of the immune system, including rheumatoid arthritis. Secondhand smoke causes stroke, lung cancer and coronary heart disease in adults. Children who are exposed to secondhand smoke are at increased risk for sudden infant death syndrome, acute respiratory infections, middle ear disease, more severe asthma, respiratory symptoms and slowed lung growth. Vaping is an alternative way to consume tobacco and has been growing in popularity.

Diabetes: Diabetes is a group of diseases characterized by high blood sugar. When a person has diabetes, the body either does not make enough insulin (type 1) or is unable to properly use insulin (type 2). When the body does not have enough insulin or cannot use it properly, blood sugar (glucose) builds up in the blood. Prediabetes is a condition in which blood sugar is higher than normal but not high enough to be classified as diabetes.

People with diabetes can develop high blood pressure, high cholesterol and high triglycerides (a type of fat in the blood). High blood sugar, particularly when combined with high blood pressure and high triglycerides, can lead to heart disease, stroke, blindness, kidney failure, amputations of the legs and feet and even early death. Diabetes is also associated with increased risk of certain types of cancer, such as liver, pancreas, uterine, colon, breast and bladder cancer. High blood sugar also increases a person’s chance of developing dementia and Alzheimer’s disease.

Tobacco and Vaping: Tobacco smoking is the practice of burning tobacco and inhaling the smoke produced. Smoking leads to disease and disability and harms nearly every organ of the body. Additionally, smoking causes cancer, heart disease, stroke, lung diseases, diabetes and chronic obstructive pulmonary disease (COPD), which includes emphysema and chronic bronchitis. Smoking also increases risk for tuberculosis, certain eye diseases and problems of the immune system, including rheumatoid arthritis. Secondhand smoke causes stroke, lung cancer and coronary heart disease in adults. Children who are exposed to secondhand smoke are at increased risk for sudden infant death syndrome, acute respiratory infections, middle ear disease, more severe asthma, respiratory symptoms and slowed lung growth. Vaping is an alternative way to consume tobacco and has been growing in popularity.
Physical Health & Activity: Being physically active means movement of the body to get to and from places, for work or for leisure. Regular physical activity is proven to help prevent and manage noncommunicable diseases such as heart disease, stroke, diabetes and several cancers. It also helps prevent hypertension, maintain healthy body weight and can improve mental health, quality of life and well-being.

Pregnancy and Maternal Health: Women in the United States are more likely to die from childbirth than women living in other developed countries. Some women have health problems that start during pregnancy, and others have health problems before they get pregnant that could lead to complications during pregnancy. Strategies to help women adopt healthy habits and get health care before and during pregnancy can help prevent pregnancy complications. In addition, interventions to prevent unintended pregnancies can help reduce negative outcomes for women.

Nutrition & Healthy Eating: Nutrition is considered something that is taken into the body as food, influencing health, while healthy eating means eating a variety of foods that give you the nutrients you need to maintain your good health. Many people in the United States do not eat a healthy diet, which could be because some people do not have the information needed to choose healthy foods or do not have access to healthy foods or cannot afford to buy enough food. People who eat too many unhealthy foods — like foods high in saturated fat and added sugars — are at increased risk for obesity, heart disease, type 2 diabetes and other health problems.

Preventative Care – Screenings: Prevention means intervening before health effects occur, through measures such as screenings, vaccinations, altering risky behaviors (poor eating habits, tobacco use) and banning substances known to be associated with a disease or health condition.

Mental Health and Mental Health Disorders: Mental illnesses are conditions that affect a person’s thinking, feeling, mood or behavior, such as depression, anxiety, bipolar disorder or schizophrenia. Such conditions may be occasional or long-lasting (chronic) and affect someone’s ability to relate to others and function each day. Mental health includes our emotional, psychological and social well-being. It affects how we think, feel and act. It also helps determine how we handle stress, relate to others and make healthy choices. Mental health is important at every stage of life, from childhood and adolescence through adulthood.
Prioritization Process

The Community Health Needs Assessment Committee through data review and discussion, narrowed the health needs of the community to a list of 12. Community partners on the CHNAC represented the broad range of interests and needs; from public health to the economic, of underserved, low-income and minority people in the community. During the Spring of 2022, the CHNAC met three times to review and discuss the collected data and select the top community needs.

Members of the CHNAC included:

Community Members
- Stacy Long, Executive Director, Voluntary Action Center, operating a community organization providing daily meals, a food pantry and emergency financial assistance for those that are homeless, low income or in need
- Ann Bradford, Director, Gordon County Senior Center, providing seniors a variety of services including free lunches, health screenings, legal aid and a Meals on Wheels option for home bound seniors
- Mari Casole, Social Worker, Gordon County Schools, providing education and connecting families with resources to strengthen education outcomes for students
- Wendy Shedd, Assistant Director, Gordon County Family Resource Center, focusing on children and the prevention of child abuse in all forms through education and support services for families
- Scope Denmon, Director, Gordon County Boys & Girls Club, providing a space for students to grow, the club provides financial assistance for those in need

AdventHealth Team Members
- Chris Self, President and CEO, AdventHealth Gordon and AdventHealth Murray
- Juleun Johnson, Vice President, Mission and Ministry, Southeast Region
- Garrett Nudd, Associate Vice President, Marketing and Brand Strategy
- Tracy Farriba, Director, Community Relations
- Wendy Taylor, Office Manager, Marketing and Foundation Office

Public Health Experts
- Lisa Crowder, Nurse Manager, Gordon County Health Department, providing services to all community members with a focus on those that are underserved

Members of the CHNAC included:
To identify the top needs the CHNAC took part in a prioritization activity. During the activity, the data behind each need was reviewed, followed by a discussion of the need, the impact it had on the community and the resources available to address it. CHNAC members then scored the need based on the established criteria through an online survey.

The needs found in the assessment were evaluated and ranked by the CHNAC and the HHNAC on a scale of 1 to 5 (1=lowest, 2=low, 3=moderate, 4=high, 5=highest) using the criteria below:

- **Alignment:** Does this issue align with our mission, strategy, public health or community goals? (15%)
- **Impact on Community:** What is the scope, size and seriousness of this issue? What are the consequences to the health of the community of not addressing this issue now? (25%)
- **Resources:** Are there existing, effective interventions and opportunities to partner with the community to address this issue? (30%)
- **Outcome Opportunities:** Can an impact on this issue be made in a demonstrable way and will interventions have an impact on other health and social issues in the community? (30%)

The following needs rose to the top during the CHNAC’s discussion and prioritization activity:

After a list of 12 of the top health needs of the community had been selected by the CHNAC, a Hospital Health Needs Assessment Committee (HHNAC) met to review the top needs that had been chosen. The HHNAC reviewed and discussed the needs that had been identified by the CHNAC and the available resources to address them in the community. The HHNAC also considered the Hospital’s current resources and strategies which could most effectively address the needs having the biggest short term and long-term impacts on the community. Through these discussions the Hospital selected the needs it is best positioned to impact.

**Members of the HHNAC included:**
- Chris Self, President and CEO, AdventHealth Gordon and AdventHealth Murray
- Juleun Johnson, Vice President, Mission and Ministry, Southeast Region
- Garrett Nudd, Associate Vice President, Marketing and Brand Strategy
- Tracy Fanbros, Director, Community Relations
- Erika Meyer, Manager, Marketing
- Wendy Taylor, Office Manager, Marketing and Foundation Office

The HHNAC followed the same process as the CHNAC for prioritization, narrowing down the list to three priority needs:

- **Heart Disease and Heart-Related Issues**
- **Cancer**
- **Vaping**

**Focusings on seniors and low-income individuals residing in the 30701 zip code**

**Heart Disease and Heart-Related Issues**

**Focusings on seniors and low-income individuals residing in the 30701 zip code**

**Cancer**

**Focusings on low-income individuals residing in the 30701 zip code**

**Vaping**

**Focusings on adults and youth residing in the 30701 zip code**
2022 Community Health Needs Assessment

Available Community Resources

When evaluating the top issues in the community a review of the available organizations and resources addressing these issues was conducted to understand where the greatest impact could be made.

Priorities Addressed

Heart Disease and Heart-Related Issues

According to secondary data, individuals in the Hospital’s community have higher rates of coronary heart disease and of heart disease mortality per 100,00 than elsewhere in Georgia and the nation. Almost 40% of community survey respondents report having hypertension, which can be a major contributing factor to heart disease and hypertension is shown to be one of the top ten codes in Hospital visits by uninsured patients. Also, 1/3 of individuals living in the community have been told they have high cholesterol which can be a contributing factor to heart disease as well.

There are several heart disease and heart related health indicators where the community is faring more poorly than others in the state and the nation. Recognizing that healthy lifestyle habits can be an important preventative approach and treatment to addressing this priority, the Hospital will consider strategies that can be both proactive and reactive.

Cancer

Focusing on low-income individuals residing in the 30701 zip code

In the Hospital’s community 6.4% of the residents have had cancer according to secondary data. There is also a higher mortality rate per 100,000 than in both the state and the nation for colorectal cancer and lung, trachea and bronchus cancer in Gordon County. When addressing cancer as a priority, the Hospital can look to align to local, state and national efforts when developing resources to create better outcome opportunities over the next three years.

Vaping

Focusing on adults and youth residing in the 30701 zip code

According to community survey respondents, 19.7% are vaping every day or some days. Stakeholders also consider vaping to be a top health behavior risk factor, particularly among youth. Nationally, the prevalence of vaping and e-cigarette usage has been rising among youth and although vaping is considered to be less than harmful than smoking tobacco, there is still much unknown about its long-term effects. In addressing the priority, the Hospital will look at both proactive strategies to keep people from starting and reactive strategies to help them quit.
Food Insecurity
More than 16% of the residents in the Hospital’s community are food insecure according to Feeding America and 37.2% live in a low food access area. According to community survey respondents, 21.3% received SNAP benefits last year, while 19.2% felt they ate less than they should have due to cost. The Hospital believes that other organizations are better positioned in the community to address this need directly and will support those efforts when able.

Pregnancy and Maternal Health
In Gordon County, the primary county served by the Hospital, 10.5% of mothers who give birth have no or late prenatal care and the premature birth rate is at 9.2%. There is also a higher infant mortality rate in Gordon County than in the state.

The Hospital did not select pregnancy and maternal health as a priority as it is not resourced to directly address this in the community but will support other community partners where possible in their efforts.

Mental Health and Mental Health Disorders
In the Hospital’s community, 22.5% of residents have a prevalence of depression, while 19.3% of the residents report poor mental health. According to community survey respondents 23.4% have been diagnosed with a depressive order and more than 26% have been diagnosed with an anxiety disorder. Although the mental health needs of the community are significant, the HHNAC did not perceive the ability to impact the issue with existing Hospital resources at this time and did not select it as a priority.

Priorities Not Addressed
The priorities not addressed include:

Preventative Care and Screenings
According to community survey respondents, 34.6% are not aware of what preventative screenings are needed. Among those that are aware, 27.6% report not getting regular screenings. Public data shows that 73.2% of community members are up to date on routine checkups.

The Hospital did not select preventative care and screenings as a priority due to a lack of resources. However, the Hospital did select heart disease and heart related issues as a priority, which is disproportionately impacting the community, and may use preventative care strategies in addressing it.

Diabetes
Diabetes is shown to impact 12.1% of residents in the Hospital’s community according to public data, while 21.8% of community survey respondents report having diabetes. Diabetes related conditions are also shown to be one of the top ten codes in Hospital visits by uninsured patients.

The Hospital did not select diabetes as a priority as it is not positioned to directly address this in the community at large and will focus its available resources where there is the greatest opportunity for positive impact.

Nutrition and Healthy Eating
According to community survey respondents, 44.1% eat fruits and vegetables less than two days a week. Secondary data shows 37.2% of residents in the Hospital’s community live in a low food access area and almost a quarter (22.6%) live in a very low food access area. The Hospital believes that other organizations are better positioned in the community to address this need directly and will support those efforts when able.

Physical Health and Activity
In the Hospital’s community, 34.2% of residents report not engaging in physical activities outside of their jobs according to secondary data. The community also has a higher percentage, 16.8%, than both the state and the nation of residents who report 14 or more days in the last 30 during which their physical health was not good. Community members in the assessment cited a need for more low-cost fitness centers and accessible community spaces for recreation. The Hospital believes that other organizations are better positioned in the community to address this need directly and will support those efforts when able.
The Hospital will work with the CHNAC and other community partners to develop a measurable Community Health Plan for 2023-2025 to address the priority issues. For each priority, specific goals will be developed including measurable outcomes, intervention strategies, and the resources necessary for successful implementation. Evidence-based strategies will be reviewed to determine the most impactful and effective interventions. For each goal, a review of policies that can support or deter progress will be completed with consideration of opportunities to make an impact. The plan will be reviewed quarterly with an annual assessment of progress. A presentation of progress on the plan will also be presented to the hospital board annually.

A link to the Community Health Plan will be posted on AdventHealth.com prior to May 15, 2023.
The Hospital evaluates the progress made on the implementation strategies from the Community Health Plan annually. The following is a summary of progress made on our most recently adopted plan. The full evaluation is available upon request.

Priority 1: Cancer
In the 2019 CHNA, the Hospital addressed cancer as a priority. The assessment showed the cancer mortality rate per 100,000 in the Hospital’s community (183.6) was higher than in the state (162.1). The rates for lung cancer and cervical cancer were also higher than state rates. The community’s rate of individuals receiving cancer screenings, sigmoidoscopy or colonoscopy and PAP tests, was lower than in the state.

Since adopting the plan, the Hospital has focused its efforts on increasing education on the importance of early diagnosis and treatment. To support this, the Hospital has created custom educational materials which include information on the importance of early detection, diagnosis and treatment, as well as identify local care options for individuals in need. Through participation in several community events the Hospital has connected almost 200 individuals with education and care options in the local community.

Priority 2: Chronic Disease
The Hospital chose chronic disease as a priority in the 2019 assessment as many chronic disease health indicators were similar or worse than the state average. For example, in the Hospital’s community there is a higher percentage of adults diagnosed with diabetes (15.5%) than in the state (11.5%). The percentage of adults with high cholesterol and heart disease in community is also higher than the state averages.

As part of their efforts to address the need in the community, the Hospital has provided free screenings and education to raise awareness about chronic disease and the benefits of proactive screenings. This has led to more than 700 community members receiving free screenings and almost 150 individuals attending classes on diabetes education, weight management and learning strategies on how to manage a chronic disease.

Priority 3: Mental Health
In the 2019 CHNA, the Hospital also prioritized mental health. During the assessment, it was found that the Hospital’s community had a slightly higher rate of death due to intentional self-harm (suicide) per 100,000, 15.4, compared to the state rate of 13.3. The percentage of individuals over 18 in the community who report receiving insufficient social or emotional support all or most of the time is also higher than elsewhere in the state.

Since adopting the plan, the Hospital has focused on increasing awareness around the importance of mental health and connecting individuals to resources which support it. Through these efforts the Hospital has connected with almost 300 community members to provide education and connect them with needed resources.

Priority 4: Vaping
The Hospital also chose vaping as a priority. During the 2019 assessment, community stakeholders vocalized concern over the growing number of children who had begun vaping. The use of e-cigarettes is particularly unsafe for children, teens and young adults as it is not only highly addictive but harmful to adolescent brain development time is also higher than elsewhere in the state.

As part of the effort to address this, the Hospital partnered with local schools to provide educational seminars on the impacts of vaping. Due to the pandemic, these efforts were delayed because of public health recommendations around social distancing. The Hospital is continuing to work with the schools to provide education on vaping to students but is no longer doing it through in-school seminars.
2019 Community Health Needs Assessment Comments

We posted a link to the most recently conducted CHNA and most recently adopted 2020 Community Health Plan on our Hospital website as well as AdventHealth.com prior to May 15, 2020 and have not received any written comments.
