It is my honor to serve as CEO of AdventHealth’s Central Florida Division – North Region, which includes Lake, Flagler and Volusia counties. From the city of Mount Dora overlooking Lake Dora to the sunny beaches of Palm Coast and the bustling neighborhoods of Deltona, we are on a journey together to build healthy communities.

Thank you for taking the time to review the 2022 Community Health Needs Assessment. It is the culmination of a yearlong collaborative process spearheaded and resourced by a steering committee of leaders from community-based organizations, along with community leaders (health equity champions), who ensured we were including voices from all populations. Your health equity champions in Lake, Volusia and Flagler worked closely with the community – they reviewed materials, identified focus groups, and helped to prioritize the health needs of the areas we serve. This publication includes a summary of the focus groups, the Community Health Survey, stakeholder interviews and an analysis of population-health data.

The 2022 Community Health Needs Assessment will serve as a guide as we work together with community partners, organizations and our health equity champions in developing Community Health Plans for the communities from Astor to Clermont, Palm Coast to New Smyrna Beach, Daytona Beach to Deltona, Deland and Deltona so every person has an opportunity to attain full health potential. Together our collective vision will maximize efforts through collaboration, driving our communities to success.

Thank you again for your interest in the 2022 Community Health Needs Assessment.

Audrey Gregory, Ph.D.
President and CEO
Central Florida Division North Region

Letter From Leadership
Community Asset Inventory

The next step was to create a Community Asset Inventory. This inventory was designed to help the Collaborative understand existing community efforts to address the identified issues from aggregate primary and secondary data and to prevent duplication of efforts. See Available Community Resources for more.

Prioritization Process

The Collaborative participated in a prioritization process that consisted of two rounds of online surveying and one facilitated discussion session per county (Lake, Orange, Osceola & Seminole) followed by one full Collaborative facilitated discussion. See Priorities Selection for more.

**Executive Summary**

Florida Hospital Waterman, Inc dba AdventHealth Waterman will be referred to in this document as AdventHealth Waterman or “The Hospital”. AdventHealth Waterman in Tavares, Florida, conducted a community health needs assessment from August 2021 to June 2022. The goals of the assessment were to:

- Engage public health and community stakeholders, including low income, minority and other underserved populations.
- Assess and understand the community’s health issues and needs.
- Understand the health behaviors, risk factors and social determinants that impact health.
- Identify community resources and collaborate with community partners.
- Publish the Community Health Needs Assessment.
- Use assessment findings to develop and implement a 2023-2025 Community Health Plan based on the needs prioritized in the assessment process.

The Community Health Needs Assessment was completed as a collaborative process with the Central Florida Collaborative, which included Lake, Orange, Osceola and Seminole county health care providers, Federally Qualified Health Centers and the Florida Department of Health for Lake, Orange, Osceola and Seminole counties. The full report from the Central Florida Collaborative can be found here: https://www.adventhealth.com/community-health-needs-assessments.

Community Health Needs Assessment Committee

In order to ensure broad community input, AdventHealth Waterman took part in the Central Florida Collaborative, referred to as the Collaborative, to help guide the Hospital through the assessment process. The Collaborative served as the Community Health Needs Assessment Committee (CHNAC). The Collaborative included representation from the Hospital, public health experts and the broad community. This included intentional representation from low-income, minority and other underserved populations. The Collaborative worked with Crescendo Consulting Group to complete the CHNA process. The Collaborative met several times throughout 2021-2022. They reviewed the primary and secondary data and helped to identify the top priority needs in the community. See the Prioritization Process section for a list of Collaborative members.

Data

AdventHealth Waterman, in collaboration with the Collaborative, collected both primary and secondary data. The primary data included community surveys, stakeholder interviews and community focus groups. In addition, public data was utilized from state and national data sources. Primary and secondary data were compiled and analyzed to identify the top 15 aggregate issues. See the Process and Methods section for Primary and Secondary Data Sources.

The Collaborative and the Hospital also considered four factors during prioritization.

A. Alignment: Does this issue align with our mission, strategy, public health or community goals?
B. Impact on Community: What is the scope, size and seriousness of this issue? What are the consequences to the health of the community of not addressing this issue now?
C. Resources: Are there existing, effective interventions and opportunities to partner with the community to address this issue?
D. Outcome Opportunities: Can an impact on this issue be made in a demonstrable way, and will interventions have an impact on other health and social issues in the community?
AdventHealth Waterman is part of AdventHealth. With a sacred mission of Extending the Healing Ministry of Christ, AdventHealth strives to heal and restore the body, mind and spirit through our connected system of care. More than 80,000 skilled and compassionate caregivers serve 4.7 million patients annually. From physician practices, hospitals, outpatient clinics, skilled nursing facilities, home health agencies and hospice centers, AdventHealth provides individualized, wholistic care at nearly 50 hospital campuses and hundreds of care sites throughout nine states.

Committed to your care today and tomorrow, AdventHealth is investing in research, new technologies and the people behind them to redefine medicine and create healthier communities.

AdventHealth hospital facilities participated in this assessment, including AdventHealth Orlando, a major tertiary referral hospital for Central Florida and much of the southeast, the Caribbean and South America. These eight facilities have service areas encompassing parts of each county in the Central Florida region with a total of 2,953 beds, including acute care, pediatric care, organ transplant, NICU levels II and III, comprehensive rehabilitation, adult psychiatric care and much more. While these AdventHealth facilities are located in Lake, Orange, Osceola and Seminole counties, their primary service areas extend into Brevard, Flagler, Polk and Volusia counties.

In a 2020 study by Stanford University, physicians and researchers from AdventHealth were featured in the ranking of the world’s top 2% of scientists. These critical thinkers are changing medicine and shaping the future of health care.

Amwell, a national telehealth leader, named AdventHealth the winner of its Innovation Integration Award. This telemedicine accreditation recognizes organizations that have identified connection points within digital health care to improve clinical outcomes and user experiences. AdventHealth was recognized for its innovative digital front door strategy, which is making it possible for patients to seamlessly navigate their health care journey. From checking health documentations and paying a bill, to conducting a virtual urgent care visit with a provider, we are making health care easier. Creating pathways to wholistic care no matter where your health journey starts.

AdventHealth is also an award-winning workplace aiming to promote personal, professional and spiritual growth with its workplace culture. Recognized by Becker’s Hospital Review on its “50 Places to Work in Healthcare” three years straight. This recognition is given annually to health care organizations that promote workplace diversity, employee engagement and professional growth.

Facility Description

AdventHealth Central Florida Division is represented in the Central Florida Collaborative by AdventHealth Altamonte Springs, AdventHealth Apopka, AdventHealth Celebration, AdventHealth East Orlando, AdventHealth Kissimmee, AdventHealth Orlando, AdventHealth Waterman, AdventHealth Winter Garden and AdventHealth Winter Park. This AdventHealth system in Central Florida is comprised of 370,000 skilled and compassionate caregivers working in physician practices, hospitals, outpatient clinics, skilled nursing facilities, home health agencies and hospice centers to provide individualized, wholistic care.

AdventHealth Waterman is a 300-bed acute-care community hospital located in Central Florida, was established in 1938 and has been the cornerstone of health care excellence in Lake County. A Grade-A Safety hospital since 2013, hospital services include: 24-hour emergency department and pediatric emergency services, award winning and comprehensive heart program, including open heart and thoracic surgery, comprehensive Cancer Institute, including leading cancer treatment technologies, certified Joint Replacement Center, Community Primary Health Clinic, critical care services, award winning advanced diagnostic imaging services, including 3D mammography, computerized tomography (CT), magnetic resonance imaging (MRI), ultrasound and nuclear medicine), digestive health care, home care services, inpatient and outpatient rehabilitation services, laboratory services, sports medicine, surgical services including minimally invasive and robotic assisted surgeries, urology, 24-bed Women and Children’s Center, wound and hyperbaric medicine and spiritual care.
Description
Located in Lake County, Florida, AdventHealth Waterman defines its community as Lake County. The Central Florida Collaborative selected county level data in order to capture the needs of residents throughout the wide service area covered by the participating agencies and the Hospital service area.

According to the 2020 Census, the population in Lake County has grown by nearly 19% in the last ten years to 383,956 people. This is almost triple the amount of growth in the United States since the last Census.

Demographic and community profile data in this report are from publicly available data sources such as the U.S. Census Bureau and the Center for Disease Control and Prevention unless indicated otherwise. Data are reported for the County level service area, also referred to as the community, unless listed for a specific county. Data are also provided to show how the community compares locally, in the state and at a national level for some indicators.

Community Profile
Age and Sex
The median age in the Hospital’s community is 46.9, higher than that of the state, which is 42.0 and the U.S., 38.1.

Females are the majority, representing 51.5% of the population. Adults ages 20-64 years are the largest demographic in the community at 52.2%.

Children, ages 0-19 years are 21.2% of the total population in the community. Infants, those zero to four, are 4.9% of that number. The community birth rate is 9.7 births per 1,000 women. This is below the statewide average of 10.3 births per 1,000 women. The life expectancy for Lake County residents is 78 years, which is lower than the state (79.4) but higher than the U.S. (77.8).

Seniors, those 65 and older, represent 26.5% of the total population in the community. Lake County has a much higher percentage of seniors than Orange, Osceola and Seminole counties and the state. While all age groups have unique and ever-changing health needs, older populations are more likely to require more health care services. In 2019, the average annual cost of individual health care was approximately $1780 for ages 45 to 54, compared to approximately $3,050 for those 65 and over.

AdventHealth Waterman

Central Florida Collaborative

Lake County, Florida
Lake County presents less racial diversity than other counties in the Collaborative, with 82.5% identifying as White. Approximately 30.3% of residents in Lake County identify as an ethnic minority. In comparison to national and state figures, the percentage of people who do not speak English is lowest in Lake County (4.7%).

Economic Stability

The median household income in the Hospital’s community is $55,792. This is below the median for both the state and the U.S ($57,003 and $64,994 respectively). The Black/African American population in Lake County presents the lowest median household income ($44,681) across all races in the county, but is higher than the state (4.7%) and represents pre-Covid-19 pandemic rates. Racial and ethnic minorities living in poverty often present with exacerbated health outcomes compared to the White population in Lake County. Residents of impoverished communities are at increased risk for mental illness, chronic disease, higher mortality and lower life expectancy. In Lake County, a higher percentage of minority populations are living in poverty, which is also reflected in the lower median household income per year. In the community, the population living in poverty is 11.1% which is lower than the state and the U.S., at 13.3% and 12.8% respectively, however, significant disparities exist for the Black/African American and Hispanic/Latino populations in Lake County compared to Whites or Asians living in poverty.

Food Insecurity and Housing Stability

People who are food insecure, having reduced quality and/or amount of food intake, may be at an increased risk of negative health outcomes. Studies have shown an increased risk of obesity and chronic disease in adults who are food insecure. Those who are food insecure have been found to have an increased risk of obesity and developmental problems compared to children who are not. For 2021, the percentage of the population in Lake County that are food insecure was 13.9% which was slightly lower than that of the state (13.3%). The percentage of food insecure children in the county was 20.9%, higher than the 19.1% for the state.

Housing Challenges in Lake County

Lake County has severe housing challenges. 36% of the population in Lake County have severe housing problems. The percentage of people living in mobile homes is much higher in Lake County (18.5%) than in Florida (8.9%) and the United States (6.2%).

Unemployed civilian labor force rate, which is higher than that of both Florida and the United States (both at 5.4%) and represents pre-Covid-19 pandemic rates. Racial and ethnic minorities living in poverty often present with exacerbated health outcomes compared to the White population in Lake County. Residents of impoverished communities are at increased risk for mental illness, chronic disease, higher mortality and lower life expectancy. In Lake County, a higher percentage of minority populations are living in poverty, which is also reflected in the lower median household income per year. In the community, the population living in poverty is 11.1% which is lower than the state and the U.S., at 13.3% and 12.8% respectively, however, significant disparities exist for the Black/African American and Hispanic/Latino populations in Lake County compared to Whites or Asians living in poverty.

4 U.S. Census Bureau, American Community Survey 2017-2021 5 Year Estimates
Education Access and Quality

Research shows education can be a predictor of health outcomes, as well as a path to address inequality in communities. Higher education can lead to better jobs, which can result in increased wages and access to health insurance. In the Hospital’s community, there is a 93.2% high school graduation rate, which is higher than the state. The percentage of residents that have obtained a high school diploma or higher in Lake County is 90.0%, which is higher than Florida and the U.S. both at a rate of 88.5%. Despite the statistics, racial and ethnic minorities in Lake County may face unique barriers to higher education. Black/African American and Hispanic/Latino individuals have lower college enrollment and graduation rates compared to White individuals. Latino individuals are most likely to attend college part-time, which reduces their odds of graduating.

Educational attainment and unemployment rates in Lake County vary across each race and ethnicity, but those who identify as Hispanic/Latino present greater disparities. Childcare services, especially for children with special needs was recognized in the top 15 community needs from information gathered in the community survey and stakeholder interviews. The community survey results also highlighted educational needs and access to and cost of childcare as top needs.

Health Care Access and Quality

From the U.S. Census Bureau, 2016-2020 American Community Survey (ACS) 5-Year Estimate, 89.4% of residents had health insurance coverage, whether private insurance, public insurance, or both. Inadequate health insurance coverage is one of the largest barriers to health care access, and the unequal distribution of coverage contributes to disparities in health. A lack of health insurance can lead to delayed care, resulting in more serious health conditions and increased treatment costs. Although health insurance coverage levels can be a strong indicator of a person’s ability to access care, there are other potential barriers that can delay care for many people.

Accessing health care requires more than just insurance, there also needs to be available health care professionals to provide care. When more providers are available in a community, access can be easier, or particularly for those experiencing transportation challenges. Routine checkups can provide an opportunity to identify potential health issues and, when needed, develop care plans. Over three-quarters of the population had health insurance but when looking at utilization of health care services and immunizations, numbers of utilization were low. In the Hospital’s community, 13.6% of people report not being able to see a doctor in the past year due to the cost. Over 22% of Lake County residents who identified as Hispanic/Latino ethnicity could not see a doctor at least once in the past year due to cost – nearly double the percentage of Non-Hispanic/Latino White residents (11.5%).

The need for recruitment and retention of culturally diverse and informed providers who demographically reflect the community was identified by stakeholders and focus group participants. Under 50% of the population of Lake County received immunizations for the flu and pneumonia. In the community survey, dental care was identified as the second most important health need for children in the Collaborative service area.

Utilization of Health Care Services by Adults

Lake County

- Adults who could not see a doctor at least once in the past year due to cost: 13.6%
- Adults who have a personal doctor: 73.2%
- Adults who said their overall health was good to excellent: 78.7%
- Had a medical checkup in the past year: 79.0%
- Visited a dentist or a dental clinic in the past year (2016): 57.2%

Immunizations

- Received a flu shot in the past year: 40.0%
- Have ever received a pneumonia vaccination: 43.5%
Increasingly, a community’s neighborhoods and built environment are being shown to impact health outcomes. If a neighborhood is considered to have “low food access”, which is defined as being more than ½ mile from your nearest supermarket in an urban area or 10 miles in a rural area, it may make it harder for people to have a healthy diet. A very low access food area is defined as being more than 1 mile from your nearest supermarket in an urban area or 20 miles in a rural area. A person’s diet can have a significant impact on health, so access to healthy food is important. For example, the largest contributors to cardiovascular disease are obesity and Type 2 diabetes, both of which can be impacted by diet.6

The impact of the neighborhood and built environment on health and well-being cannot be emphasized enough. For example, there are many available references showing the benefits of living near a park or “green space.” In Lake County, 21.3% of residents live within 0.5 miles of a park. This is lower than Florida’s 40.5%. Many people in the United States live in neighborhoods with high rates of violence, unsafe air or water and other health and safety risks. Racial and ethnic minorities and people with low incomes are more likely to live in places with these risks. In addition, some people are exposed to things at work that can harm their health, like secondhand smoke or loud noises.8

Mental Health & Behavioral Health (Drug & Substance Use)
Mental health including drug and substance use were identified as top needs from primary and secondary data for Lake County. In 2019, suicide rates were highest in those who identify as White, 22.5 per 100,000, slightly higher compared to Lake County total (20.0). This changed in 2020, those who identified as non-Hispanic/Latino had the highest rate of suicide at 19.9 per 100,000, slightly higher than the Lake County total (17.8).10

Social and Community Context
People’s relationships and interactions with family, friends, co-workers and community members can have a major impact on their health and well-being.11 When faced with challenges outside of their control, positive relationships with others can help reduce negative impacts. National research shows that people more connected to family, friends and others have fewer mental health challenges and generally better health. Also, they also have higher self-esteem and are better at engaging others. People can connect through work, community clubs or others to build their own relationships and social support. There can be challenges to building these relationships when people don’t have connections to create them, or there are barriers like language between groups.

The Collaborative survey results show that most people agree that they have social connections in their lives. In the community, only 4.5% of respondents to the Collaborative survey disagreed that they are happy with their friendships and relationships. Nearly one in seven residents (15%) stated that they do not have enough people in their lives to ask for help. One in nine residents (11%) indicate that relationships and friendships are not as satisfying as they would want them to be. These factors can create barriers to feeling connected in the community.

Mental Health including suicide was a top need identified by survey participants, stakeholders and focus groups. Illegal Drug Use/Abuse of Prescription Medications and Alcohol Abuse/Drinking Too Much was identified as the top risky behavior within Lake County through the community survey. From the community survey, 55.9% of participants believe illegal drug use and prescription medicine abuse is an unmet need in Lake County. In addition, support for family members of a person being treated for substance use disorder was also recognized by stakeholders and focus group participants. In the community survey, mental and behavioral health was identified as the most important need for children in the Collaborative service area. Suicide prevention was also identified on the survey as one of the top health needs for children in the Collaborative service area. The community surveys, stakeholder interviews and focus groups also identified a need for mental health outpatient service capacity, mental health crisis services and community awareness of available resources and mental health care for senior services. From the survey, adults who needed mental health care but did not receive it said that the reasons for unmet need was due to being unable to pay for care, unable to schedule an appointment when needed, lack of awareness about navigating the system and finding a doctor/counselor.

10 Florida Department of Health. Bureau of Vital Statistics
Process, Methods and Findings

The health of people living in the same community can be very different because there are so many influencing factors. To understand and assess the most important health needs of its unique community and the people in it, the Collaborative solicited input directly from the community and from individuals who represent the varied interests of the community. A real effort was made to reach out to all members of the community to obtain perspectives across age, race/ethnicity, gender, profession, household income, education level and geographic location. The Collaborative also collected publicly available data for review.

The Hospital partnered with local community organizations and stakeholders, including those in public health and those who represent the interests of medically underserved, low-income and minority community members, to form the Central Florida Collaborative to guide the assessment process. During data review sessions, community members of the Collaborative provided insight on how health conditions and areas of need were impacting those they represented. The Collaborative used the data review and discussion sessions to understand the most important health needs and barriers to health the community was facing and to guide the selection of needs to be addressed in the 2022 CHNA.

Community Input

The Collaborative collected input directly from the community and from community stakeholders, individuals working in organizations addressing the needs and interests of the community. This was collected through a community survey, stakeholder interviews, and focus groups.

Community Health Survey
- A total of 4,284 surveys were collected with 3,456 from Lake, Orange, Osceola and Seminole counties.
- Lake – 266, Orange – 822, Osceola – 1,729, Seminole – 639
- Provided in English, Haitian Creole, Spanish, Portuguese and Vietnamese to anyone in the community and accessible through web links and QR codes.
- Links and QR codes were shared through targeted social media posts and with community partners including public health organizations. Partners were provided links to the survey, with the request that it be sent to electronic mailing lists, they maintained and when possible shared on their own social media channels.
- Paper surveys were given to partners to place at their organizations with the goal of reaching those who might not have access otherwise and experience barriers to responding electronically. Responses from paper surveys were recorded using survey websites.

Stakeholder Interviews
- Interviews were scheduled with 101 community stakeholders who were asked to provide input on health and barriers to health that they were seeing in the community.

Focus Groups
- Focus groups were held with 30 groups of community stakeholders to gain input on health and barriers to health in the community.
- A focus was on hearing from stakeholders who represent or serve communities that are underserved, underrepresented, lower income, and/or who are more likely to be impacted by the social determinants of health.
Public and Community Health Experts Consulted

The Central Florida Collaborative served as the CHNAC. The Collaborative provided their expertise and knowledge regarding the community throughout the process. The Collaborative consisted of organizations representing the community, public health, low income, minority, and other underserved populations. The following chart contains members of the Central Florida Collaborative who provided strategic leadership throughout the CHNA and/or served as stakeholders.

The Findings

There were 15 aggregate needs found in the assessment process that rose to the top for Lake County.

Behavioral Health:
Drug and Substance Use:
• Community services to reduce illegal drug use and abuse or misuse of prescription medications
• Support for family members of a person being treated for substance use disorder

Early Childhood Education:
• Childcare services, especially for children with special needs

Community Engagement in Available Resources and Services:
• Social Support, Social Integration, Community Engagement
• Recruitment and retention of culturally diverse and informed providers who demographically reflect the community
• Dental care for children, especially those from low income or other priority communities
• Access to free or low-cost healthcare services for all residents
• Access to primary care services

Mental Health:
• Youth mental health services
• Suicide prevention initiatives in middle and high schools
• Mental health outpatient services capacity
• Mental health crisis services and community awareness of available resources
• Mental health care for senior services
• Suicide prevention

Housing and Income:
• Affordable, quality housing
Prioritization Process

The Collaborative and the Hospital through data review and discussion narrowed down the needs of the community. Community Partners in the Collaborative represented the broad range of interests and needs, from public health needs to the economic needs, for underserved, low-income and minority people in the community. The Collaborative met on a monthly basis to review and discuss the collected data and select the top community needs.

For a full list of members of the Central Florida Collaborative which includes community members, public health experts and hospital representation please see page 18-21.

Members of the Central Florida Collaborative included:

AdventHealth Team Members
- Stephanie Arguello, Director, Community Health, AdventHealth Central Florida Division South Region
- Elizabeth Aulner, Community Health Program Manager, AdventHealth Central Florida Division South Region
- Rebecca Desir, Community Health Program Manager, AdventHealth Central Florida Division South Region
- Renee Furnas, Community Relations Manager, AdventHealth Central Florida Division
- Sarah Hawkins, Community Health Program Manager, AdventHealth Central Florida Division South Region

Public Health Experts
- Melaine Chin, Florida Department of Health in Lake County
- Aaron Kissler, Florida Department of Health in Lake County
- Jeremy Lanier, Florida Department of Health in Osceola County
- Vianca McCluskey, Florida Department of Health in Osceola County
- Ana McDougall, Florida Department of Health in Osceola County
- Patricia Mondragon, Florida Department of Health in Seminole County
- Ellis Perez, Florida Department of Health in Orange County
Public Health Experts (continued)

- Raul Pino, MD, MPH, Florida Department of Health in Orange County
- Chadthayn Renduchintala, Florida Department of Health in Orange County
- Ana Scotter, Florida Department of Health in Seminole County
- Dhanya Varghese, Florida Department of Health in Orange County
- Donna Walsh, Florida Department of Health in Seminole County

The Collaborative participated in a prioritization process based on the Delphi method that consisted of two rounds of online surveying and three facilitated discussion sessions. The needs were then evaluated by hospital leadership using AdventHealth priority criteria, which considered four factors:

- A. Alignment: Does this issue align with public health or community goals?
- B. Impact on Community: What is the scope, size and seriousness of this issue? What are the consequences to the health of the community of not addressing this issue now?
- C. Resources: Are there existing effective interventions and opportunities to partner with the community to address this issue?
- D. Outcome Opportunities: Can an impact on this issue be made in a demonstrable way and will interventions have an impact on other health and social issues in the community?

Using these criteria, AdventHealth leadership reviewed the 15 priorities from the Collaborative and made the decision to group multiple needs together so similar or related needs could be addressed under one priority. Ultimately, three of these groups were chosen as final priorities. The groups of needs are outlined below:

Behavioral Health: Drug and Substance Use
- Community services to reduce illegal drug use and abuse or misuse of prescription medications
- Support for family members of a person being treated for substance use disorder

Early Childhood Education
- Childcare services, especially for children with special needs

Community Engagement in Available Resources and Services
- Social Support, Social Integration, Community Engagement
- Recruitment and retention of culturally diverse and informed providers who demographically reflect the community
- Dental care for children, especially those from low income or other priority communities
- Access to free or low-cost healthcare services for all residents
- Access to primary care services

Mental Health
- Youth mental health services.
- Suicide prevention initiatives in middle and high schools.
- Mental health outpatient services capacity.
- Mental health crisis services and community awareness of available resources.
- Mental health care for senior services.
- Suicide prevention.

Housing & Income
- Affordable, quality housing

The three groups chosen as AdventHealth Waterman’s priorities are:
1. Behavioral Health: Drug and Substance Use
2. Early Childhood Education
3. Community Engagement on Available Resources and Services

Priorities Addressed

The final three priorities were selected based on the community need, availability of existing resources and alignment with system approaches. A list of existing community resources can be found in the Available Community Resources section of this document on page 36. The final three priorities for AdventHealth Waterman include:

Priority 1: Behavioral Health: Drug and Substance Misuse

Substance use disorders can involve illicit drugs, prescription drugs, or alcohol. Opioid use disorders, which stem from the improper use of prescription drugs, have become especially problematic in recent years. By addressing alcohol and drug misuse as a priority, the Hospital can align with local, state and national efforts for resources to create better outcomes opportunities over the next three years.

Lake County Need

In Lake County, Fentanyl deaths increased 310% from 2013 to 2019 and Methamphetamine deaths increased 335% from 2013 to 2019. Between 2018 and 2020, Lake County has presented the highest rate of opioid prescriptions within the service area (Lake, Orange, Osceola & Seminole Counties). Community services to reduce illegal drug use and abuse or misuse of prescription medications and support for family members of a person being treated for substance use disorder were also recognized as top needs within Lake County. Awareness of and the need to address substance misuse, as well as growing fentanyl crisis, has been increasing in the country. By addressing alcohol and drug misuse as a priority, the Hospital can align with local, state and national efforts for resources to create better outcomes opportunities over the next three years.

2022 Community Health Needs Assessment
Early childhood education describes the period of learning that takes place from birth to 8 years old. There are several types of early education programs, including those that are federal, state, or privately funded. Early childhood, particularly the first 5 years of life, impacts long-term social, cognitive, emotional, and physical development. Healthy development in early childhood helps prepare children for the educational experiences of kindergarten and beyond.

Lake County Need:

The data showed that the percentage of youth ready for kindergarten at entry was 56% in Lake County, which is still higher than that of the state (50%). The Hospital prioritized early childhood education because of the foundation it provides for better health and long-term outcomes for all residents. Childcare services, especially for children with special needs was identified as a top need in the Lake County data review.

Priorities 3: Community Engagement in Available Resources and Services

Social support stems from relationships with family members, friends, colleagues, and acquaintances. Social capital refers to the features of society that facilitate cooperation for mutual benefit, such as interpersonal trust and civic associations. Individual social support and cohesive, capital-rich communities help to protect physical and mental health and facilitate healthy behaviors and choices. People with greater social support, less isolation, and greater interpersonal trust live longer and healthier lives than those who are socially isolated. Neighborhoods richer in social capital provide residents with greater access to support and resources than those with less social capital. Additionally, neighborhoods with lower social capital may be more prone to violence than those with more social capital and often have limited community resources and role models.

Lake County Need:

Data in the assessment highlighted how complicated the health care system can be to understand and navigate, even for those who work within the industry. Many stakeholders discussed how disconnected different parts of the health care system are, leading to a lack of care coordination between different providers and a low awareness in the community of what services and resources are available. Word-of-mouth tends to be the best method to share information, especially in priority populations. Social support, social integration, community engagement, recruitment and retention of culturally diverse and informed providers who demographically reflect the community and dental care for children, especially those from low-income or other priority communities were also identified as top needs within Lake County. The Hospital hopes to improve the health of the community by increasing community engagement and awareness of the resources and services available that improve health and by connecting residents to them.

Priorities Not Addressed

There is a growing need in Lake County to increase the available resources addressing mental health needs. The assessment found the percentage of adults reporting poor mental health is slowly increasing statewide, however in Lake County the percentage remained the same from 2016-2018 (12.5%).15 In Lake County adults under 45 have the highest report of poor mental health. Lake County also lags behind the statewide average for both mental health providers and adult psychiatric beds. Many stakeholders discussed how complicated the health care system can be to understand and navigate, even for those who work within the industry. Many stakeholders discussed how disconnected different parts of the health care system are, leading to a lack of care coordination between different providers and a low awareness in the community of what services and resources are available. Word-of-mouth tends to be the best method to share information, especially in priority populations. Social support, social integration, community engagement, recruitment and retention of culturally diverse and informed providers who demographically reflect the community and dental care for children, especially those from low-income or other priority communities were also identified as top needs within Lake County. The Hospital hopes to improve the health of the community by increasing community engagement and awareness of the resources and services available that improve health and by connecting residents to them.
Next Steps

The Collaborative will work with the Hospital and other community partners to develop a measurable Community Health Plan for 2023-2025 to address the priority needs. For each priority, specific goals will be developed including measurable outcomes, intervention strategies and the resources necessary for successful implementation.

Evidence based strategies will be reviewed to determine the most impactful and effective interventions. For each goal, a review of policies that can support or deter progress will be completed with consideration of opportunities to make an impact. The plan will be reviewed quarterly with an annual assessment of progress. A presentation of progress on the plan will also be presented to the Hospital board annually.

A link to the Community Health Plan will be posted on AdventHealth.com prior to May 15, 2023.
The Hospital evaluated the program against the implementation strategies from the Community Health Plan annually. The following is a summary of progress made on our most recently adopted plan. The full evaluation is available upon request.

Priority 1: Access to Care: Cost of Care, Insurance & Medication for Cancer

In the 2019 CHNA, the Hospital selected to address Access to Care: Cost of Care, Insurance & Medication for Cancer. The Hospital exceeded its set metric to increase the number of uninsured women who received appropriate follow-up imaging and diagnostic work-up. Development of a streamlined process for identifying women prior to imaging exam furthered the ease of access to care. Expediting insurance coverage, scheduling appointments, provider outreach, education, prevention and screening activities with the through-put work-up. Additionally, the Hospital progressed on its set metric of 10 uninsured patients. As part of this priority, the Hospital also sought to improve the timely administration of chemotherapy and radiation and consults and education. Of the 114 uninsured women screened, 43 were eligible for funding assistance. Over the course of 2021, 59 were eligible for funding and care coordination through Florida Breast and Cervical Cancer Early Detection Program (FBCCEDP). Although the Hospital has completed the objective, it will continue to utilize the program. Under this priority the Hospital also sought to improve the timely administration of chemotherapy for identified uninsured/uninsured cancer patients treated at AdventHealth Waterman annually in accordance with the national standard of treatment initiation within 48 hours. The Hospital met this metric by referring 10 uninsured patients with 59 completed. As part of the priority, the Hospital progressed on its set metric of 500 assessments with 59 completed. As part of the Hospital's commitment to care and recognition of the access and transportation challenges that exist with our community, we have adopted a one-stop shop approach to assessments and screenings. By providing a litany of diagnostic services in one visit, community members are able to better understand their overall health and understand their needs for follow up care. To accomplish this, the Hospital provided a health risk assessment to individuals to flag any areas that may require a deeper dive. Upon receiving the results of the assessment, additional screenings are provided for cancer diagnoses that were completed. Additionally, the Hospital exceed its second metric of 10 individuals per a total of 41 individuals for all activities and provided 95% of participants 100% follow up to those identified to be at risk for cancer. Through collaboration with facility physician liaisons, radiation oncologists and nurse navigators the Hospital surpassed its goal to educate 150 health care providers regarding navigator services and other resources for uninsured/low pay patients by providing in-person offices to provide one-on-one education on available nurse navigation services for uninsured and underinsured patients diagnosed with cancer.

Priority 2: Prevention: Screenings, Well Visit & Behaviors as a Result of the Pandemic

Focusing on all ethnicities ages 18+, this condition was selected because data shows that diabetes is one of the leading chronic diseases in Lake County, and the percentage of adults with diagnosed diabetes in Lake County is higher than the Healthy People 2020 goal, and there is a strong community concern about the impact of obesity on both children and adults. The Hospital progressed on its set metric of 500 screenings with 59 screenings being completed. Additionally, the Hospital exceeded its second metric of 90% of participants referred to free programs with 100% participants referred. The Hospital also exceeded its second metric of 50% of participants referred to free programs offered in the community. This objective was surpassed on through a screening and assessment activity held for residents in two (2) low-income housing communities and one (1) food distribution site. With the assistance of community partners 59 low-income individuals were screened for chronic disease and provided with the necessary resources to access care within the community.

Priority 3: Diabetes: Type II

Focusing on all ethnicities ages 18+, this condition was selected because data shows that diabetes is one of the leading chronic diseases in Lake County, and the percentage of adults with diagnosed diabetes in Lake County is higher than the state average. The Hospital progressed on its set metric of 100 screenings with 59 screenings being completed. Additionally, the Hospital exceeded its second metric of 90% of participants referred to free programs with 100% participants referred. As part of the Hospital’s commitment to care and recognition of the access and transportation challenges that exist with our community, we have adopted a one-stop shop approach to assessments and screenings. By providing a litany of diagnostic services in one visit, community members are able to better understand their overall health and understand their needs for follow up care. To accomplish this, the Hospital provided a health risk assessment to individuals to flag any areas that may require a deeper dive. Upon receiving the results of the assessment, additional screenings are provided for cancer diagnoses that were completed. Additionally, the Hospital exceed its second metric of 10 individuals per a total of 41 individuals for all activities and provided 95% of participants 100% follow up to those identified to be at risk for cancer. Through collaboration with facility physician liaisons, radiation oncologists and nurse navigators the Hospital surpassed its goal to educate 150 health care providers regarding navigator services and other resources for uninsured/low pay patients by providing in-person offices to provide one-on-one education on available nurse navigation services for uninsured and underinsured patients diagnosed with cancer.

Priority 4: Obesity (Adult & Children)

Focusing on all ethnicities ages 18+, this condition was selected because data shows that obesity is one of the leading chronic diseases in Lake County, and the percentage of adults with obesity in Lake County is higher than the Healthy People 2020 goal, and there is a strong community concern about the impact of obesity on both children and adults. The Hospital progressed on its set metric of 500 of assessments with 59 completed. As part of the Hospital’s commitment to care and recognition of the access and transportation challenges that exist with our community, we have adopted a one-stop shop approach to assessments and screenings. By providing a litany of diagnostic services in one visit, community members are able to better understand their overall health and understand their needs for follow up care. To accomplish this, the Hospital provided a health risk assessment to individuals to flag any areas that may require a deeper dive. Upon receiving the results of the assessment, additional screenings are provided for cancer diagnoses that were completed. Additionally, the Hospital exceed its second metric of 10 individuals per a total of 41 individuals for all activities and provided 95% of participants 100% follow up to those identified to be at risk for cancer. Through collaboration with facility physician liaisons, radiation oncologists and nurse navigators the Hospital surpassed its goal to educate 150 health care providers regarding navigator services and other resources for uninsured/low pay patients by providing in-person offices to provide one-on-one education on available nurse navigation services for uninsured and underinsured patients diagnosed with cancer.

The 2022 Community Health Plan Review
Priority 5: Cardiovascular Disease

Focusing on all ethnicities and age groups, this condition was selected because data shows that even though there is a decrease in mortality, heart disease is still the second leading cause of death in Lake County. The Hospital progressed on its set metric of 100 participants screened with 59 participants screened. Additionally, the Hospital exceeded its second metric of 90% of participants referred to free resources with 100% participants referred. As part of the Hospital’s commitment to care and recognition of the access and transportation challenges that exist with our community, we have adopted a one-stop shop approach to assessments and screenings. By providing a list of diagnostic services in one visit, community members are able to better understand their overall health and understand their needs for follow up care. To accomplish this, the Hospital provides a health risk assessment to individuals to flag any areas that may require a deeper dive. Upon receiving the results of the assessment, additional screenings are provided for cancer, diabetes, obesity and heart disease. Through this approach we are able to identify the chronic conditions in our community that can have the most lasting impact and direct individuals to the appropriate avenue of care. Outcome numbers for these assessments and screenings are aggregated across the objectives and do not represent unique individuals. Over the course of 2021, 59 individuals received health assessments, of these 41 received an additional level of diagnostic care through screenings for chronic diseases. The Hospital progressed on its set metric of 100 participants by the end of year three with 808 reached. A virtual Healthy Lifestyle presentation was given to four local Boys and Girls clubs across Lake County reaching 171 children. Participants received multi forms of education on the benefits of healthy eating and active lifestyles, including but not limited to, through participation in interactive games, songs and a presentation from a pediatrician and registered dietician. All participants received a holiday healthy gift box consisting of fruit, nuts, vegetable juice, activity games and were encouraged to continue to choose healthy foods and maintain an active lifestyle for optimal health and weight.

2020 Community Health Plan Comments
We posted a link to the most recently conducted CHNA and most recently adopted implementation strategy on our Hospital website as well as AdventHealth.com prior to May 15, 2022, and have not received any written comments.
### Available Community Resources

As part of the assessment process, a list of resources or organizations addressing the top needs in the community was created. Although not a complete list, it helped to show where there were gaps in support and opportunities for partnership in the community when the collaborative chose which priorities to address.

For an up-to-date list of resources in your community, please visit: [WholeHealthHub.org](http://WholeHealthHub.org)
