

# NON-ICU COVID19 CARE PATHWAY

## Quick Reference Guide

Supplemental to COVID19 PowerPlan Utilization

Hospital Medicine

Revised 10.28.20

<b>Indicate level of suspicion of COVID</b>	
In your assessment and plan based on History, Physical and Diagnostic testing as below	
+ CT scan suggestive of COVID or CXR with bilateral infiltrates	Any of the following lab abnormalities: <ul style="list-style-type: none"> <li>Lymphopenia (35-75% of the cases)</li> </ul>
Hx of community/ family contact with COVID or travel to high risk areas	<ul style="list-style-type: none"> <li>Increased values of CRP or ESR (75–93% of cases)</li> <li>LDH elevation (27–92% of cases)</li> </ul>
Fever 101 or greater: 75% of patients	<ul style="list-style-type: none"> <li>Elevated D-dimer</li> </ul>
Influenza and RSV-PCR negative turnaround time 1 hour if available	<ul style="list-style-type: none"> <li>Low procalcitonin</li> </ul>
<b>Isolation Tips</b>	
Special droplet (N95 + eye protection) + Contact (gown + gloves). Note: for COVID19 + COVID PUI and any patient on aerosol generating procedures regardless of isolation status	If COVID-19 testing is <b>negative</b> , consider the following:
Aerosolizing procedures in negative pressure room if available	<b>High Probability</b> Keep on unit and re-test
Avoid unnecessary aerosolizing procedures e.g. nebulization (switch to inhalers), non-invasive ventilation (CPAP, BiPAP)	<b>Moderate Probability</b> Re-evaluate for possible repeat testing and/or continued observation
	<b>Low Probability</b> Please transfer off Cohort and <b>notify PCP* (T/C Home)</b>
<b>To help reduce risk for potential exposure due to false negatives</b>	
<ul style="list-style-type: none"> <li><b>High risk patients</b> from cohort units with <i>1 negative COVID 19 PCR</i> <ul style="list-style-type: none"> <li>Should <b>remain on Cohort unit until 2<sup>nd</sup> test results are available</b></li> <li>Remain on special contact/droplet precautions</li> </ul> </li> <li>Patients with <b>1 negative PCR</b> and no 2<sup>nd</sup> test results pending <ul style="list-style-type: none"> <li>Must remain on <b>droplet precautions for the remainder of their stay.</b></li> </ul> </li> <li>Patients with <b>2 negative PCRs</b> and meeting CDC criteria for discontinuing precautions <ul style="list-style-type: none"> <li><b>May have precautions discontinued</b></li> </ul> </li> </ul>	
<b>Therapeutic options should be based on severity using the following scale:</b>	
<ul style="list-style-type: none"> <li>0 = Patient on room air</li> <li>1 = Patient requires supplemental O2 via NC up to a max of 6L</li> <li>2 = Patient requires supplemental O2 in addition to ONE of the following <ul style="list-style-type: none"> <li>Dyspnea or staccato speech at rest or after minimal activity</li> <li>RR &gt; 22 on 6L</li> <li>PaO2 &lt;65 mmHg with 6L</li> <li>Worsening infiltrates on imaging (CT preferred)</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>3 = Patient requires HFNC, CPAP or NIV</li> <li>4 = Patient intubated with minimal support PaO2/FiO2 or using PS</li> <li>5 = Patient intubated with PaO2/FiO2 &gt; 150 mmHg</li> <li>6 = Patient intubated with PaO2/FiO2 &lt; 150 mmHg</li> <li>7 = Patient intubated with PaO2/FiO2 &lt; 150 mmHg AND requiring vasopressor support</li> <li>8 = Patient intubated in prone position or ECMO</li> </ul>
Severity Score	Treatment for Hospitalized Patients*
0	Support care only – if clinically stable, consider discharge for self-quarantine
1	<b>Remdesivir</b> (based on criteria) Dexamethasone 6mg po or IV daily for up to 10 days Convalescent Plasma
2	<b>Remdesivir</b> (based on criteria) <b>Corticosteroids</b> <b>Convalescent Plasma</b>
3	<b>Corticosteroids</b> <b>Convalescent Plasma</b>
≥4	<b>Corticosteroids</b> <b>Convalescent Plasma</b>

\*Patient can be discharged whenever clinically indicated. Full duration of therapy does not need to be completed if patient is suitable for discharge to home. Isolation should be maintained at home for the time period recommended for discontinuation.

**Upon admission to Cohort Unit, please notify PCP<sup>^</sup> of patient's admission**

**\*\*\*Consults:** Please limit to only those deemed necessary based upon clinical picture

<sup>^</sup>PCP: original group pt would have been assigned to without Cohort unit

# NON-ICU COVID19 CARE PATHWAY

## Quick Reference Guide

Supplemental to COVID19 PowerPlan Utilization

Hospital Medicine

Revised 10.28.20

Lab Work:		Lab results to expect:	
STAT order COVID-19 PCR & HIV 1/2 Antigen/Antibody Screen Fourth Generation		*Potential marker of disease severity	
Upon Admission	CBC, BMP, Magnesium, CRP, LFT, CPK, LDH, PTT, INR, procalcitonin, troponin, NT-proBNP, D-dimer, Ferritin	Normal WBC	Elevated AST*/ALT
Daily	CBC, BMP, Magnesium <i>(If patient is in ICU: add troponin, CPK)</i>	Lymphopenia*	Elevated CRP*
Every Other Day	LFT, CPK, troponin, CRP, LDH, D-dimer, Ferritin <i>(If patient on propofol: add triglyceride)</i>	Mild thrombocytopenia	Elevated LDH*
	LFT, CPK, troponin, CRP, procalcitonin, LDH, ferritin, D-dimer, fibrinogen, PTT, INR	BMP with elevated Cr	Elevated D-dimer*
		Normal procalcitonin	Elevated troponin
Care Recommendations			
<b>CT Chest</b>	NOT necessary for diagnosis (caution w CT d/t increase risk of spread thru transport, break in isolation and risk of AKI)		
<b>Daily CXR</b>	NOT necessary unless it will change management plan		
<b>IV Fluids</b>	Conservative fluid management is important to mitigate risk of progression of respiratory failure		
<b>Steroids</b>	Avoid using empirically, only use if other indication (i.e. Pt. requires supplemental O2) <b>(Refer to PP)</b>		
<b>Antibiotics</b>	Utilize if bacterial superinfection likely (Review with pharmacy and/or consult ID)		
<b>Code Blue</b>	Don PPE prior to entering room, even if this delays CPR. Stop chest compressions for intubation to decrease secretions		
Non-ICU COVID-19 Care Checklist			
<b>Oxygenation</b>	<input type="checkbox"/> If requiring Oxygen: attempt to wean O2 at least once per shift and document if desats <input type="checkbox"/> If on RA at rest: ambulate the patient on RA at least once per shift and document if desats <input type="checkbox"/> If O2 requirements increase by >1L: consider putting the patient in Prone Position (if tolerates) <b>(Refer to Prone PP)</b> <input type="checkbox"/> Consider utilization of Heated High Flow O2 <i>(Unless patient condition warrants Heated High Flow O2 should stay on PCU)</i>		
<b>Positioning</b>	<input type="checkbox"/> Encourage Prone Position (as much as tolerated) if requiring >2L via NC <input type="checkbox"/> If patient cannot tolerate Prone Position, encourage lying on the side or sitting upright		
<b>Medications</b>	<input type="checkbox"/> Review for: <ul style="list-style-type: none"> <li>o If requiring Oxygen:               <ul style="list-style-type: none"> <li>▪ <b>Dexamethasone...Severity Score 1 &amp; Above</b></li> <li>▪ <b>Remdesivir</b> (Contraindicated in Renal Failure; Liver Enzymes 5xNL)...<b>Severity Score 1-2</b></li> </ul> </li> <li>o <b>Tocilizumab</b>: Based on current evidence routine use is not recommended</li> </ul> <input type="checkbox"/> Antibiotics for bacterial superinfection <i>(Discontinue if Not Identified)</i> <input type="checkbox"/> VTE prophylaxis <ul style="list-style-type: none"> <li>o Preferably Lovenox or Heparin</li> <li>o If SCD only and patient is refusing, notify physician to consider pharmacoprohylaxis</li> <li>o If D-dimer is trending up or very elevated, consider therapeutic anticoagulation doses <i>(Wells' Criteria)</i></li> </ul>		
<b>Labs</b>	<input type="checkbox"/> Generally check at least every 2-3 days (more often if patient status is changing) <ul style="list-style-type: none"> <li>▪ D-dimer, Ferritin, CRP, CBC, CMP</li> </ul> <input type="checkbox"/> May recheck for negative COVID 7 days after last positive test / onset of symptoms		
<b>Hydration</b>	<input type="checkbox"/> Avoid excessive hydration/volume overload; discontinue continuous fluids if patient is taking PO well		
<b>Nutrition</b>	<input type="checkbox"/> Document % meal consumed <input type="checkbox"/> If routinely <50% consumed: request order for dietary supplement		
<b>Patient Activity</b>	<input type="checkbox"/> If requiring >3L O2: minimize activity without Oxygen (as these patients desaturate quickly) <ul style="list-style-type: none"> <li>▪ Have bedside commode/bed pan/diaper</li> </ul> <input type="checkbox"/> Encourage frequent Incentive Spirometer use/have at bedside		
<b>Criteria rapid response/ obtain ABG/ consider upgrade to ICU:</b>	<input type="checkbox"/> Requiring >6L NC <input type="checkbox"/> Low PaO2 on ABG while on 6L or more via NC <input type="checkbox"/> Increased respiratory rate/work of breathing <input type="checkbox"/> Altered mental status		
Remdesivir Process			
<b>Medical Provider</b> Flagler/Lake/Polk/Volusia: <a href="#">Order thru Multi-State COVID PowerPlan by selecting "Consult to pharmacy-remdesivir"</a> Orange/Osceola/Seminole: <a href="#">Order thru Remdesivir PowerPlan in PowerChart</a> . Enter Consult to Pharmacy for Remdesivir.
